

Is there any food I
should put in the
Compost bin?

How Does
Temperature
Affect my
compost?

Well the
weather
affects
your
Compost
alot!

If it's too hot it
can speed up the
decaying
process

oo- is that old
me!?

Many bio-degradable
objects are good for
your compost!

Such as
fruits, vegetables,
and even
dried brown
leaves!

What can I put in a compost bin?

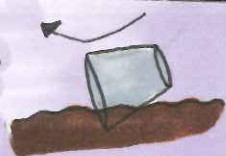

Although you can
technically add animal
products its not
very good & can attract
pests. Also its terrible
for vermi compost.

Do not add man made products like glass, plastic, candy, and greasy foods!

What shouldn't I put in a compost bin?

The cleanest way to harvest your compost would be the scoop method!

What's the cleanest way to harvest your compost?

It's where you scoop up the top layer of compost

Compost

If you have vermicompost then take the lid off and leave it for 10 minutes.

This way you don't scoop up

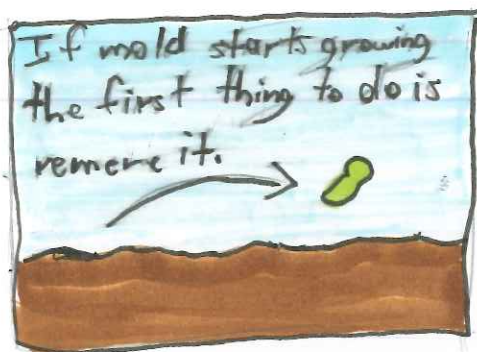

Worms

Since they don't like light, they'll travel down.

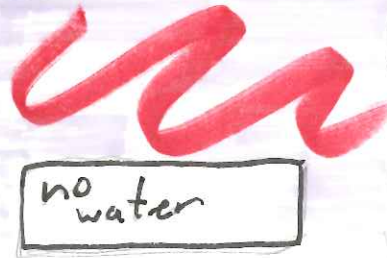

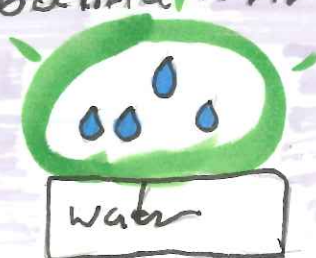

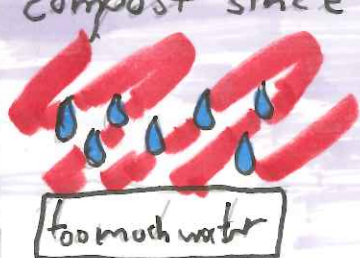

v.s.

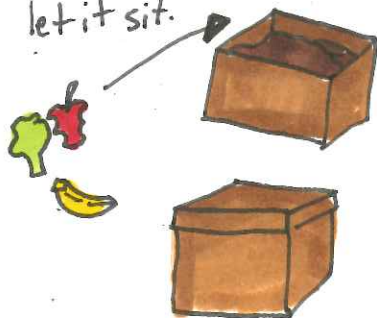

What should I do if mold starts growing.

To avoid this from happening again you want to make sure your not over watering your compost since bacteria thrives in wet areas.

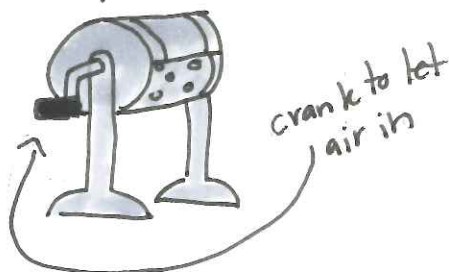

THERE ARE 3 DIFFERENT TYPES OF COMPOST

First is Aerobic when you put it in the bin and let it sit.

This isn't the best method since it takes years and is bad for the environment.

The second type is Anaerobic compost. This compost works by letting air in so that it speeds the process of decay.

This compost takes more care but is a great choice.

What are ways to compost?

The third is vermicompost. This choice uses worms to make compost.

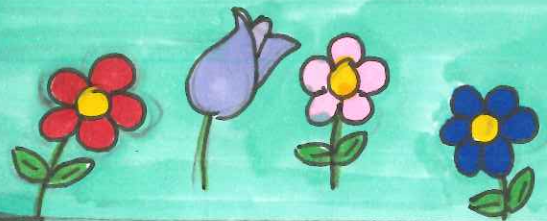

With this method you don't have to do much but occasionally change the bedding & add scraps

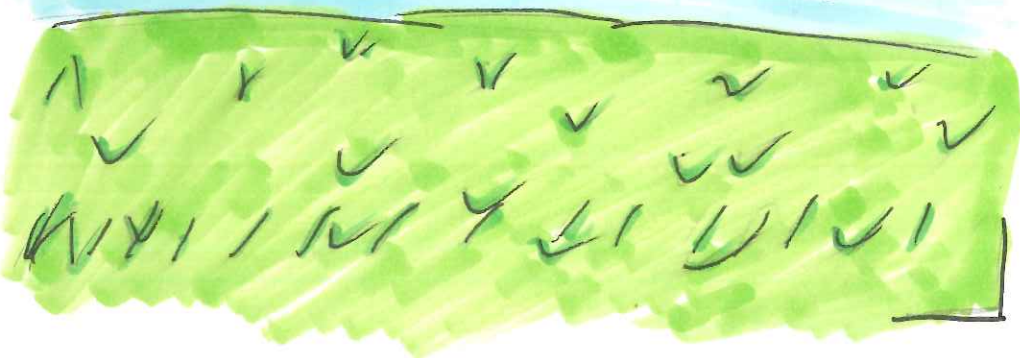

There ~~are~~ a lot of things you can use compost for!

You can use it for your garden.

And even for your yard!

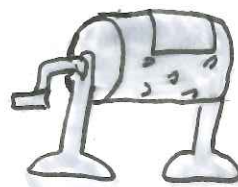

There are 3 different types of compost bins.

The first is just a simple box that is best for Aerobic but could also be used for Anerobic compost.

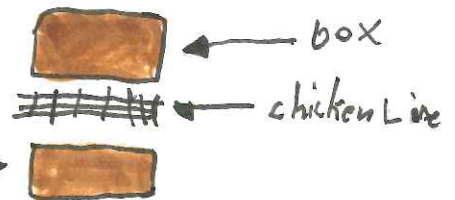

There's also a tumbler which is used for anerobic compost.

You use the crank to stir air through.

The third type has two boxes stacked on each other with chicken wire in between so that the worms can burrow & have a nesting area.

What are the different types of compost bins?

Bedding is necessary for vermicompost so that the worms have space to lay eggs.

What is bedding & which is the best?

The best type is carbon based, some examples of this are coconut fibers & news paper strips.
