## Probability Board Game Caspian Clifford - 7th Grade

### What I did...

For my board game project in which I am making a video game in scratch, I have used some of my skills such as coding and problem solving. Some of the things I need the game to do don't exist, for example, I need to have it so that when the player jumps up onto the next platform, all the platforms scroll down with the player to the middle of the screen, so I had to emulate them with different blocks.

### Why I made this...

I like using coding to make things like video games and art, so I decided to make a video game as well as a board game. I'm interested in coding, so I put more time into making it than things that I am less interested in.

I plan to incorporate probability in my game by making the powerups have a different chance of appearing.
